THOUGHTS FROM “TED”

Hi Folks,

* Time is flying by as usual, in this hurry-up world, but it is a breath of fresh air to have your tractor to slow down and enjoy the work that would be a hard task and is now turned into fun! Rototilling for your winter garden time is also here. We've already disked 15 acres for oat hay planting. Seed and fertilizer are just now available.

* Did you know you can run a 110/220 volt generator for your home/barn from your PTO on your tractor? Yep, call us for details....winter is on the way.

* A quick word about service and warranty. When we have a warranty claim on an engine or running gear, the factory representative requires us to show all service records referencing scheduled hourly maintenance i.e. 50 hour, 100 hour, 200 hour services, etc. We have never had them deny any claims on a tractor that has had its scheduled maintenance kept up! Point being, getting your new tractor serviced by the book makes it better for all of us.

“Customer of the Month”

Angels Camp RV Resort

Ken Jeffries and Sterly Engman have taken on quite a project up in the foothills of Angels Camp. They just purchased a Mahindra 2015HST with a GX500 Wallenstein Backhoe to help with their projects. While the campers enjoy the camp grounds with its tent sights, full hook-ups and cabins, they are busy building volleyball, horseshoe courts and more with their Mahindra. If you're looking for a great place to take the family camping or just for a ride they might show you how they use their new tractor and backhoe around the resort and beautiful camp grounds. Thanks Ken, Sterly and families.....we appreciate your business and think you have a great camp ground. Keep up the good work.

“An Important Safety Tip”

Owner/Operator Checklist For Operator and Unit Safety and Efficiency

- Regularly check all nuts and bolts — particularly those relating to the attachment of wheels, steering and brake assemblies.
- Tires should be routinely inspected for cuts, cracks and tread wear. Correct inflation pressures have a direct relationship to safety.
- Any oil leaks should be attended to immediately in order to avoid the risk of fire and to prevent any major problem developing.
- Any indication of brake deterioration should be treated as serious and the tractor should be taken out of action while the trouble is rectified by a competent mechanic.
- A change in clutch “feel” should be immediately investigated and if necessary repairs or any needed adjustments carried out.
- Make sure that all safety attachments are in place.
- If the tractor is under warranty it is the owner’s obligation to immediately report any problems to the dealer from whom the tractor was purchased.
- NOTE: That in order to maintain the warranty, the owner must make sure that all maintenance is done and documented at the prescribed intervals or the warranty will not remain valid. It is best to have services done at the dealership you purchased the tractor at so they can maintain the service records for warranty purposes.
- When a tractor is not in use it should be totally immobilized by removing the key to prevent any unauthorized operation.
- The tractor’s electrical equipment requires regular inspection to prevent the possibility of a loose or frayed wire causing a dead short that could start a fire.
- Many tractors and attachments create potentially injurious high decibel levels. In these instances quality ear muffs or plugs are essential. Prolonged exposure to noise hazards will cause permanent hearing damage.
- With non cab tractors it is recommended that safety glasses be worn, particularly during mowing and mulching operations. Safety glasses also give eye protection against insects.
- Reminder. There should be NO RIDERS other than the operator on a tractor.

Ken Rand and his brother Pete, long time friends of ours, sent us pictures of their vintage tractors they got from Ted.

Ken sent a picture of his Allis Chalmers WD 45 before he really got into his complete restoration.

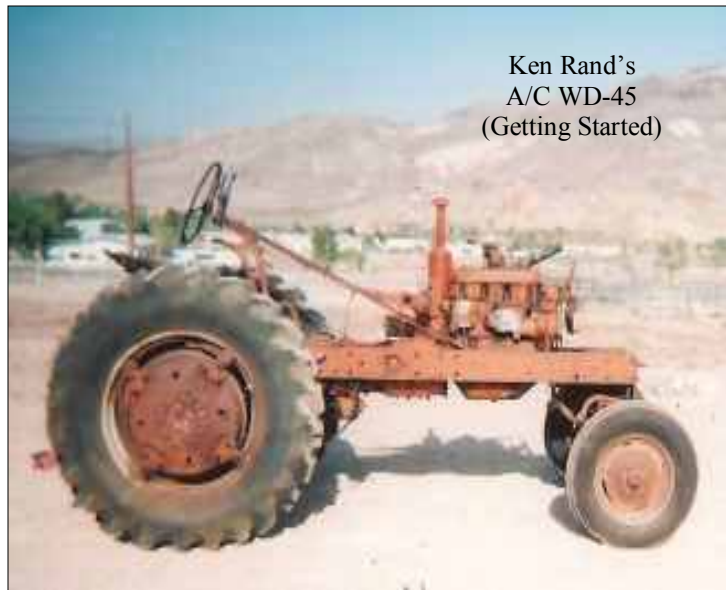

The finished tractor is so much better!

Pete promised me a “before” picture too but I didn’t get it in time to add here but the finished restored McCormick W-4 looks great!

Great job Ken & Pete you want some more tractors to work on?
